

# Springtail Kit Setup and Care Guide

You have received:

- One plastic Container with lid
- Charcoal pieces
- Demineralised water
- Springtails
- Nutritional Yeast

To set your culture up:

1. Place the charcoal evenly on the bottom of the container in a single layer. (You should be able to close the lid)
2. Pour the water into the container – it should be half way up the charcoal pieces.
3. Now you can remove the moss and springtails and place all of it on top of the charcoal.
4. Sprinkle half a pinch of nutritional yeast (crumbling it between your fingers as you sprinkle it) all over the charcoal.
5. Place the lid and seal.

Your springtails will now start to lay eggs and multiply within 3 weeks. You need to resprinkle the nutritional yeast once every 4-5 days and open the lid once a day so they can get a whiff of fresh air.
